the classification of finite simple groups is a landmark result of modern mathematics the multipart series of monographs which is being published by the ams volume 40 1 40 7 and future volumes represents the culmination of a century long project involving the efforts of scores of mathematicians published in hundreds of journal articles books and doctoral theses totaling an estimated 15 000 pages this part 7 of the series is the middle of a

trilogy volume 40 5 volume 40 7 and forthcoming volume 40 8 treating the generic case i e the identification of the alternating groups of degree at least 13 and most of the finite simple groups of lie type and lie rank at least 4 moreover volumes 40 4 40 8 of this series will provide a complete treatment of the simple groups of odd type i e the alternating groups with two exceptions and the groups of lie type defined over a finite field of odd order as well as some of the sporadic simple groups in particular this volume completes the construction begun in volume 40 5 of a collection of neighboring centralizers of a particularly nice form all of this is then applied to complete the identification of the alternating groups of degree at least 13 the book is suitable for graduate students and researchers interested in the theory of finite groups

this book is the tenth in a series of volumes whose aim is to provide a complete proof of the classification theorem for the finite simple groups based on a fairly short and clearly enumerated set of background results specifically this book completes our identification of the simple groups of bicharacteristic type begun in the ninth volume of the series see surv 40 9 this is a fascinating set of simple groups which have properties in common with matrix groups or more generally groups of lie type defined both over fields of characteristic 2 and over fields of characteristic 3 this set includes 11 of the celebrated 26 sporadic simple groups along with several of their large simple subgroups together with surv 40 9 this volume provides the first unified treatment of this class of simple groups
