A Treaties of Human Nature 2013-01

hume s introduction presents the idea of placing all science and philosophy on a novel foundation namely an empirical investigation into human psychology he begins by acknowledging that common prejudice against metaphysical reasonings i e any complicated and difficult argumentation a prejudice formed in reaction to the present imperfect condition of the sciences including the endless scholarly disputes and the inordinate influence of eloquence over reason but since the truth must lie very deep and abstruse where the greatest geniuses have not found it careful reasoning is still needed all sciences hume continues ultimately depend on the science of man knowledge of the extent and force of human understanding the nature of the ideas we employ and the operations we perform in our reasonings is needed to make real intellectual progress so hume hopes to explain the principles of human nature thereby propos ing a compleat system of the sciences built on a foundation almost entirely new and the only one upon which they can stand with any security but an a priori psychology would be hopeless the science of man must be pursued by the experimental methods of the natural sciences this means we must rest content with well confirmed empirical generalizations forever ignorant of the ultimate original qualities of human nature and in the absence of controlled experiments we are left to glean up our experiments in this science from a cautious observation of human life and take them as they appear in the common course of the world by men s behaviour in company in affairs and in their pleasures

was human nature designed by natural selection in the pleistocene epoch the dominant view in evolutionary psychology holds that it was that our psychological adaptations were designed tens of thousands of years ago to solve problems faced by our hunter gatherer ancestors in this provocative and lively

book david buller examines in detail the major claims of evolutionary psychology the paradigm popularized by steven pinker in the blank slate and by david buss in the evolution of desire and rejects them all this does not mean that we cannot apply evolutionary theory to human psychology says buller but that the conventional wisdom in evolutionary psychology is misguided evolutionary psychology employs a kind of reverse engineering to explain the evolved design of the mind figuring out the adaptive problems our ancestors faced and then inferring the psychological adaptations that evolved to solve them in the carefully argued central chapters of *Adapting Minds* buller scrutinizes several of evolutionary psychology's most highly publicized discoveries including discriminative parental solicitude the idea that stepparents abuse their stepchildren at a higher rate than genetic parents abuse their biological children drawing on a wide range of empirical research including his own large scale study of child abuse he shows that none is actually supported by the evidence buller argues that our minds are not adapted to the pleistocene but like the immune system are continually adapting over both evolutionary time and individual lifetimes we must move beyond the reigning orthodoxy of evolutionary psychology to reach an accurate understanding of how human psychology is influenced by evolution when we do buller claims we will abandon not only the quest for human nature but the very idea of human nature itself

in hume's social philosophy christopher j finlay presents a highly original and engaging reading of david hume's landmark text *A Treatise of Human Nature* and political writings published immediately after it articulating a unified view of his theory of human nature in society and his political philosophy the book explores the hitherto neglected social contexts within which hume's ideas were conceived while a great deal of attention has previously been given to hume's intellectual and literary contexts important connections can also be made between the fundamentals of hume's philosophy and the social world in which it was developed finlay argues that hume's unified theory of human nature conceived in terms of passions reason and sociability was meant to account for human nature in its most articulate manifestations in the commercial and polite social contexts of eighteenth century europe through careful exegetical study of hume's analysis of reasoning and the passions finlay explores the diverse aspects of sociability which the *Treatise of Human Nature* invokes in particular this study finds in the *Treatise* an important exploration of the tensions between the selfish motivations of individuals and their propensity to bond with others in complex and diverse kinds of social group analysis of book iii of the *Treatise* and of essays published afterwards shows how the various individualist and social propensities explored through the passions are addressed in hume's theories of justice morals and politics
