 happy 12 ginger based on years of research conducted at the nasa jet propulsion laboratory low energy lunar trajectory design provides high level information to mission managers and detailed information to mission designers about low energy transfers between earth and the moon the book answers high level questions about the availability and performance of such transfers in any given month and year low energy lunar transfers are compared with various other types of transfers and placed within the context of historical missions using this book designers may reconstruct any transfer described therein as well as design similar transfers with particular design parameters an appendix locating the lagrange points and a useful list of terms and constants completes this technical reference surveys thousands of possible trajectories that may be used to transfer spacecraft between earth and the moon including transfers to lunar libration orbits low lunar orbits and the lunar surface provides information about the methods models and tools used to design low energy lunar transfers includes discussion about the variations of these transfers from one month to the next and the important operational aspects of implementing a low energy lunar transfer additional discussions address navigation station keeping and spacecraft systems issues

artificial intelligence and data science in recommendation system current trends technologies and applications captures the state of the art in usage of artificial intelligence in different types of recommendation systems and predictive analysis the book provides guidelines and case studies for application of artificial intelligence in recommendation from expert researchers and practitioners a detailed analysis of the relevant theoretical and practical aspects current trends and future directions is presented the book highlights many use cases for recommendation systems basic application of machine learning and deep learning in recommendation process and the evaluation metrics machine learning techniques for text mining and spam email filtering considering the perspective of industry 4.0 tensor factorization in different types of recommendation system ranking framework and topic modeling to recommend author specialization based on content movie recommendation systems point of interest recommendations mobile tourism recommendation systems for visually disabled persons automation of fashion retail outlets human resource management employee assessment and interview screening this reference is essential reading for students faculty members researchers and industry professionals seeking insight into the working and design of recommendation systems

solid state physicists have long appreciated the usefulness of thermal neutron scattering in the investigation of condensed matter this technique was first made possible by the advent of the nuclear reactor and has since then undergone many refinements the developments in this field of research have we felt necessitated the making of a comprehensive compilation of the published thermal neutron papers the large number of titles collected in this book as well as their diversity and their yearly distribution reflects the continued contribution of the neutron probe to our understanding of physical systems this bibliography is an updated and improved version of the one first published by us in march of 1973 under a similar title many of the omissions and inconsistencies of the first edition such as occurred for example in the initialing of authors names have been corrected the literature search has been carried back to 1932 the year when the existence of the neutron was experimentally confirmed several additional journals have also been searched and brought up to date together with those listed in our first publication the number of entries is now 8543 an increase of 65 per cent relative to the first edition
