in the summer of 1956 john mccarthy organized the famous dartmouth conference which is now commonly viewed as the founding event for the field of artificial intelligence during the last 50 years ai has seen a tremendous development and is now a well established scientific discipline all over the world also in europe ai is in excellent shape as witnessed by the large number of high quality papers in this publication in comparison with ecai 2004 there s a strong increase in the relative number of submissions from distributed ai agents and cognitive modelling knowledge representation reasoning is traditionally strong in europe and remains the biggest area of ecai 06 one reason the figures for case based reasoning are rather low is that much of the high quality work in this area has found its way into prestigious applications and is thus represented under the heading of pais

the liquid phase of soil soil solution is a very thin penetrating and all embracing water layer it has the most extensive surface among the biosphere components and interacts with all these components presented in this work is a new complex approach developed for soil liquid phase investigation that is based on in situ measurements investigation of the soil liquid phase can be of great significance in environmental research this volume sums up the vast experience of the authors research into soil liquid phase composition in various ecosystems of central and eastern europe it describes the methodological basics of soil liquid phase research methods of soil solution extraction the main problems of application of ion selective electrodes for immediate in situ assessment of ionic activity in soil liquid phase and redox potential and ways to overcome those problems data are presented on soil liquid phase composition in natural and agricultural ecosystems their redox ph carbonate and other regimes as well as the relations between the composition of the soil liquid phase and different

ecological properties this work is devoted to the pursuit of new approaches to soil liquid phase analysis with a goal of discovering the role of soil liquid phase in the functioning of natural and agricultural ecosystems in recent soil formation formation of primary biological production and in bio geochemical turnover of elements it includes new field investigation data as well as all data generalization carried out by means of a special complex database developed by the authors on soil liquid phase composition and other soil ecological properties in various ecosystems in central and eastern europe this book is the first english edition that integrally considers both methodological aspects and results of investigation of composition formation dynamics spatial heterogeneity and interrelations of soil liquid phase with other components of ecosystems soil scientists agricultural chemists and ecologists will find this title of great interest
