Drug Abuse and Drug Abuse Research 1987 the large federal role in the drug treatment system was substantially reduced in the early 1980s undercutting its ability to help communities respond to new challenges such as the crack cocaine epidemic and the growing violence in drug markets how can drug treatment dollars be spent most equitably with the highest likelihood of beneficial results with this basic question as its focus treating drug problems volume 1 provides specific recommendations on how to organize and fund the drug treatment system detailed attention is given to both public and private sources and their programs the book presents the latest data and analysis on these topics and more how specific approaches to drug treatment fit into drug policy including the different perspectives of the medical and criminal justice communities what is known about drug consumption behavior and what treatment approaches have proven most cost beneficial what areas need further research including specifications for increased study of treatment effectiveness and drug use by adolescents and young women

Dispelling the Myths About Addiction 1997-12-10 this book assists new and experienced scholars in planning and conducting high quality contemporary studies for knowledge building about substance use the target audience is individuals new to substance use as a field of study either as novice researchers or as experienced researchers in other areas who find themselves lacking experience to address overlapping issues of substance use organized around a translational science framework the contents address substance use research about epidemiology etiology intervention efficacy and effectiveness and implementation of evidence informed interventions in addition examples and issues are drawn from social work traditions involving multiple levels of study organisms to large social systems integrating biopsychosocial aspects and adopting a lifespan perspective the authors examine the implications for research of current great debates in the field and present readers with a variety of specific substance use research resources and tools this practical how to guide takes the reader step by step through issues specific to substance use research in study design participant recruitment and retention measurement and analysis and the processes involved in the dissemination diffusion and implementation of evidence informed innovations a variety of technical resources and measurement tools are provided as are references to journals for scholars to consider both as

knowledge resources and as outlets for disseminating their work in sum this book offers a fresh approach to conducting substance use research that is not readily available in other texts

Trends in Substance Abuse Research 2007 today most substance abuse treatment is administered by community based organizations if providers could readily incorporate the most recent advances in understanding the mechanisms of addiction and treatment the treatment would be much more effective and efficient the gap between research findings and everyday treatment practice represents an enormous missed opportunity at this exciting time in this field informed by real life experiences in addiction treatment including workshops and site visits bridging the gap between practice and research examines why research remains remote from treatment and makes specific recommendations to community providers federal and state agencies and other decision makers the book outlines concrete strategies for building and disseminating knowledge about addiction for linking research policy development and everyday treatment implementation and for helping drug treatment consumers become more informed advocates in candid language the committee discusses the policy barriers and the human attitudesâ the stigma suspicion and skepticismâ that often hinder progress in addiction treatment the book identifies the obstacles to effective collaboration among the research treatment and policy sectors evaluates models to address these barriers and looks in detail at the issue from the perspective of the community based provider and the researcher

Treating Drug Problems 1990-02-01 recently the research triangle institute completed a 5 year study sponsored by the national institute on drug abuse called the washington d c metropolitan area drug study dc mads drug use in metropolitan america describes relates and integrates findings from the dc mads study more than that though this book places the findings in the larger context of our national drug abuse problem therefore while there is some reporting of findings there is more emphasis on examining the policy research and program implications that flow from the studies this book will be of interest to researchers practitioners and policymakers in a number of areas as well as to academics in sociology courses dealing with drugs deviance social problems and research methodology it should also appeal to those in the psychology and medical allied health fields

Learning Factors in Substance Abuse 1988 substance abuse is one of society s most serious problems drugs seem to be readily available in virtually every country in the world substance abuse is the overindulgence in and dependence of a drug or other chemical leading to effects that are detrimental to the individual s physical and mental health or the welfare of others the disorder is characterised by a pattern of continued pathological use of a medication non medically indicated drug or toxin that results in repeated adverse social consequences related to drug use such as failure to meet work family or school obligations interpersonal conflicts or legal problems there are on going debates as to the exact distinctions between substance abuse and substance dependence but current practice standard distinguishes between the two by defining substance dependence in terms of physiological and behavioural symptoms of substance use and substance abuse in terms of the social consequences of substance use this book presents the latest research in the field

Conducting Substance Use Research 2014 surveys administered to high school students studies carried out on jail and prison inmates and interviews conducted with substance abusers undergoing treatment all point to the same conclusion drugs and crime are strongly connected why they are connected is less well understood however written for middle to upper level

undergraduate courses on drugs and crime or substance abuse and crime this book examines the drug crime connection in a systematic and comprehensive way this book covers the entire drug crime spectrum starting with a review of drug and crime terminology classification and theory and ending with policy implications for prevention harm reduction and macro level management of the drug crime problem the opening chapters discuss drugs and crime separately for the purpose of setting the stage for later discussions on drug crime relationships as the book proceeds the boundaries between drugs and crime blur thus revealing the complex and intimate relationship that links these two behaviors

Summary of Findings from the ... National Household Survey on Drug Abuse 2000 the objective of this study was to track trends in the signs of higher quality addiction treatment as defined by the national institute on drug abuse the national institute on alcohol abuse and addiction and the substance abuse and mental health services administration we analyzed the national survey of substance abuse treatment services from 2007 through 2017 to determine the percent of facilities having the characteristics of higher quality we analyzed the percent by state and over time we found improvements between 2007 and 2017 on most measures but performance on several measures remained low most programs reported providing evidence based behavioral therapies half or fewer facilities offered medications for opioid use disorder mental health assessments testing for hepatitis c hiv and sexually transmitted diseases self help groups employment assistance and transportation assistance there was significant state level variation across the measures

Behavioral Analysis and Treatment of Substance Abuse 1979 the field of drug addiction and substance abuse which was initially confined to behavioral studies has broadened dramatically it now includes a vast array of cellular and molecular approaches as well as sophisticated electrophysiological and neurochemical methodologies that bridge the gap between cellular molecular events and behavior in many cases these techniques are used to clarify and characterize specific dimensions of the addictive process or actions of potential abuse methods of drug abuse research cellular and circuit level analyses assembles this information in one volume it bridges the gap between cellular and molecular studies of drug actions and behavioral approaches to questions in drug abuse research the book presents state of the art technical information and critical reviews of the experimental strategies used to dissect the problem of compulsive drug use and addiction at the systems or whole brain level chapters provide examples of the use of neurochemical and delectrophysiological the techniques in drug studies as well as insight into the pros and cons of these various experimental strategies focusing on neurochemical and neurophysiological techniques that assess drug actions on neural circuits and neural networks in intact animals this state of the art reference provides detailed descriptions of procedures as well as methods and equipment used in experiments that often employ multiple technical approaches methods of drug abuse research brings together pertinent issues in drug abuse research and systems level investigative techniques thus allowing you to effectively grasp the critical conceptual and technical issues associated with modern drug abuse studies

Bridging the Gap Between Practice and Research 1998-08-11 this book provides a comprehensive overview of physiological biochemical and genetic pathways underlying drug addiction and resultant efforts to develop novel treatment strategies dealing with drug addiction and other cns disorders where the neurophysiological processes overlap such as treatment of pain the volume focuses on the translation of fundamental addiction research to a variety of treatments and brings together scientists with wide ranging expertise

Drug Use in Metropolitan America 1999 here in one volume is a compilation of cutting edge research in the field of drug abuse research with specific ethnic minority groups this book suggests effective ways to conduct research and enhance research opportunities with such groups ethnic and multicultural drug abuse includes summaries of ethnic minority drug abuse literature and identifies knowledge gaps highlighting areas in need of more research the authors most from african american american indian asian pacific american or hispanic backgrounds discuss topics related to the research development process report research findings and make research recommendations for african americans they cover drug abuse research issues existing mainly among asian pacific americans and hispanics and drug use patterns among a sample of american indian youth and alaskan youth throughout the book informative chapters present guidelines for preparing competitive research proposals focus on studies of the major ethnic minority groups examine adolescents and the homeless discuss theory and development provide extensive bibliographies for continuing research and study an excellent guide for facilitating the organization of a drug abuse research project emphasizing ethnic minority issues this much needed book is a welcome resource for all professionals coping with the on going struggle against drug abuse it is a state of the art book full of helpful practical information for counselors researchers in the fields of mental health drugs and alcohol and policy planners and administrators in the substance abuse field not only a guide and inspiration to persons contemplating a career in drug abuse research ethnic and multicultural drug use serves as a useful training tool to assist in educating prospective drug abuse researchers at the graduate and upper level undergraduate levels

Results from the ... National Survey on Drug Use and Health 2007 this book tells the story of the mass media s potential in the war against drug abuse it is based on scientific evidence on the use of media in health promotion and disease prevention past approaches successes and failures alike are included to help enlighten future programs of research and practice advice about the logical steps that must be taken to help alleviate the crisis of drug abuse is featured throughout the book will appeal to social scientists interested in persuasion and the media each chapter offers information to help the conscientious practitioner maximize persuasive effects of a mass mediated presentation

NIDA Research Monograph 1976 pharmacotherapy as a means of treating drug addiction in combination with other treatment modalities has received too little attention from the research community the pharmaceutical industry public health officials and the federal government medications to combat drug addiction could have an enormous impact on the medical consequences and socioeconomic problems associated with drug abuse both for drug dependent individuals and for american society as a whole this book examines the current environment for and obstacles to the development of anti addiction medications specifically those for treating opiate and cocaine addictions and proposes incentives for the pharmaceutical industry that would help overcome those obstacles and accelerate the development of anti addiction medications

Substance Abuse 2009 addiction is increasing all around the world and the conventional remedies don t work the globalization of addiction argues that the cause of this failure to control addiction is that past treatments have focused too single mindedly on the afflicted individual addict this book presents a radical rethink about the nature of addiction

Drug Abuse and Drug Abuse Research 1991 representatives from industry academia and government discuss issues related to testing for drug abuse liability and dependence potential contributors critically assess current methods for evaluating drugs in human subjects and describe both the advantages and limitations of each approach this information permits identification of

areas in which further research and development are needed
