and regional economies public health public engagement urban governance and political systems as well as big data s utility in decision making and development of indicators to monitor economic and social activity and for urban sustainability transparency livability social inclusion place making accessibility and resilience this publication includes the proceedings of the ple conference 2013 the conference on personal learning environments is now an established annual international scientific event and a reference point for the current state of the art in research and development in personal learning environments ple the ple conference creates a space for researchers and practitioners to share concepts case studies and research related to the design development and implementation of personal learning environments in diverse educational contexts including formal and informal education the 4th ple conference in 2013 took place at beuth university of applied sciences in berlin germany together with a parallel event at monash university in melbourne australia the ple conference 2013 received 75 submissions and welcomed almost 100 delegates from europe asia australasia north and south america and africa the papers included in the proceedings provide rich and valuable theoretical and empirical insights into personal learning environments personal learning environments ple is an approach in technology enhanced learning tel based on the principles of learner autonomy ownership and empowerment ples are integrated individual environments for learning which include specific technologies methods tools contents communities and services constituting complex learning infrastructures enhancing new educational practices and at the same time emerging from these new practices this represents a shift away from the traditional model of technology enhanced learning based on knowledge transfer towards a model based on knowledge construction and sharing in from mobility to accessibility an expert team of researchers flips the tables on the standard models for evaluating regional transportation performance jonathan levine joe grengs and louis a merlin argue for an accessibility shift whereby transportation planning and the transportation dimensions of land use planning would be based on people s ability to reach destinations rather than on their ability to travel fast existing models for planning and evaluating transportation which have taken vehicle speeds as the most important measure would make sense if movement were the purpose of transportation but it is the ability to reach destinations not movement per se that people seek from their transportation systems while the concept of accessibility has been around for the better part of a century from mobility to accessibility shows that the accessibility shift is compelled by the fundamental purpose of transportation the book argues that the shift would be transformative to the practice of both transportation and land use planning but is impeded by many conceptual obstacles regarding the

nature of accessibility and its potential for guiding development of the built environment by redefining success in transportation the book provides city planners decisionmakers and scholars a path to reforming the practice of transportation and land use planning in modern cities and metropolitan areas

human activities are depleting ecosystems at an unprecedented rate in spite of nature conservation efforts worldwide many ecosystems including those critical for human well being have been damaged or destroyed states and citizens need a new vision of how humans can reconnect with the natural environment with its focus on the long term holistic recovery of ecosystems ecological restoration has received increasing attention in the past decade from both scientists and policymakers research on the implications of ecological restoration for the law and law for ecological restoration has been largely overlooked this is the first published book to examine comprehensively the relationship between international environmental law and ecological restoration while international environmental law iel has developed significantly as a discipline over the past four decades this book enquires whether iel can now assist states in making a strategic transition from not just protecting and maintaining the natural environment but also actively restoring it arguing that states have international duties to restore this book offers reflections on the philosophical context of ecological restoration and the legal content of a duty to restore from an international law european union law and national law perspective the book concludes with a discussion of several contemporary themes of interest to both lawyers and ecologists including the role of private actors protected areas and climate change in ecological restoration

in from mobility to accessibility an expert team of researchers flips the tables on the standard models for evaluating regional transportation performance jonathan levine joe grengs and louis a merlin argue for an accessibility shift whereby transportation planning and the transportation dimensions of land use planning would be based on people s ability to reach destinations rather than on their ability to travel fast existing models for planning and evaluating transportation which have taken vehicle speeds as the most important measure would make sense if movement were the purpose of transportation but it is the ability to reach destinations not movement per se that people seek from their transportation systems while the concept of accessibility has been around for the better part of a century from mobility to accessibility shows that the accessibility shift is compelled by the fundamental purpose of transportation the book argues that the shift would be transformative to the practice of both transportation and land use planning but is impeded by many conceptual obstacles regarding the nature of accessibility and its potential for guiding development of the built environment by redefining success in transportation the book provides city planners decisionmakers and scholars a path to reforming the practice of transportation and land use planning in modern cities and metropolitan areas
