Surfactants in Solution

2013-03-09

this and its companion volumes 7 8 and 9 document the proceedings of the 6th international symposium on surfactants in solution held in new delhi india august 18 22 1986 under the joint auspices of the indian society for surface science and technology and indian institute of technology delhi as this symposium was a landmark it represented the tenth anniversary of this series of symposia so it is very apropos to reflect on how these symposia have evolved to their present size and status the pedigree of this series of symposia goes back to 1976 when the premier symposium in this series was held actually in 1976 it was a modest start and it was not possible at that time to gaze at the crystal ball and predict what would be the state of affairs in 1986 for historical purposes it should be recorded here that the first symposium was held in albany ny under the title micellization solubilization and microemulsions the second symposium was christened solution chemistry of surfactants and was held in knoxville tn in 1978 the venue for the third symposium in 1980 was potsdam ny and it was dubbed international symposium on solution behavior of surfactants theoretical and applied aspects

Railway Age

1951

pharmaceutics is the art of pharmaceutical preparations it encompasses design of drugs their manufacture and the elimination of micro organisms from the products this book encompasses all of these areas provided by publisher

U.S. Department of Transportation Federal Motor Carrier Safety Administration Register

2011-01-04

with over 100 illustrations volume 1 addresses the core disciplines of pharmaceutics absorption pk excipients tablet dosage forms and packaging and explores the challenges and paradigms of pharmaceutics key topics in volume 1 include principles of drug absorption chemical kinetics and drug stability pharmacokinetics the effect of route of administration and distribution on drug action in vivo imaging of dose forms gamma scintigraphy pet imaging nmr mri etc powder technology excipient design and characterization preformulation optimization techniques in pharmaceutical formulation and processing disperse and surfactant systems the solid state tablet dosage forms coating processes and hard and soft shell capsules parenteral products

Chemical Engineering

2007

this new edition brings you up to date on the role of pharmaceutics and its future paradigms in the design of medicines contributions from over 30 international thought leaders cover the core disciplines of pharmaceutics and the impact of biotechnology gene therapy and cell therapy on current findings modern pharmaceutics helps you stay current

Aulton's Pharmaceutics

2013

optimization is the act of obtaining the best result under given circumstances in design construction and maintenance of any engineering system engineers must make technological and managerial decisions to minimize either the effort or cost required or to maximize benefits there is no single method available for solving all optimization problems efficiently several optimization methods have been developed for different types of problems the optimum seeking methods are mathematical programming techniques specifically nonlinear programming techniques nonlinear optimization models and applications presents the concepts in several ways to foster understanding geometric interpretation is used to re enforce the concepts and to foster understanding of the mathematical procedures the student sees that many problems can be analyzed and approximate solutions found before analytical solutions techniques are applied numerical approximations early on the student is exposed to numerical techniques these numerical procedures are algorithmic and iterative worksheets are

provided in excel matlab and mapletm to facilitate the procedure algorithms all algorithms are provided with a step by step format examples follow the summary to illustrate its use and application nonlinear optimization models and applications emphasizes process and interpretation throughout presents a general classification of optimization problems addresses situations that lead to models illustrating many types of optimization problems emphasizes model formulations addresses a special class of problems that can be solved using only elementary calculus emphasizes model solution and model sensitivity analysis about the author william p fox is an emeritus professor in the department of defense analysis at the naval postgraduate school he received his ph d at clemson university and has taught at the united states military academy and at francis marion university where he was the chair of mathematics he has written many publications including over 20 books and over 150 journal articles currently he is an adjunct professor in the department of mathematics at the college of william and mary he is the emeritus director of both the high school mathematical contest in modeling and the mathematical contest in modeling

1971-02

a step by step guide to parallelizing cem codes the future of computational electromagnetics is changing drastically as the new generation of computer chips evolves from single core to multi core the burden now falls on software programmers to revamp existing codes and add new functionality to enable computational codes to run efficiently on this new generation of multi core cpus in this book you ll learn everything you need to know to deal with multi core advances in chip design by employing highly efficient parallel electromagnetic code focusing only on the method of moments mom the book covers in core and out of core lu factorization for solving a matrix equation a parallel mom code using rwg basis functions and scalapack based in core and out of core solvers a parallel mom code using higher order basis functions and scalapack based in core and out of core solvers turning the performance of a parallel integral equation solver refinement of the solution using the conjugate gradient method a parallel mom code using higher order basis functions and plapack based in core and out of core solvers applications of the parallel frequency domain integral equation solver appendices are provided with detailed information on the various computer platforms used for computation a demo shows you how to compile scalapack and plapack on the windows operating system and a demo parallel source code is available to solve the 2d electromagnetic scattering problems parallel solution of integral equation based em problems in the frequency domain is indispensable reading for computational code designers computational electromagnetics researchers graduate students and anyone working with cem software

Modern Pharmaceuticals Volume 1

2009-05-28

problem solving is essential to solve real world problems advanced problem solving with maple a first course applies the mathematical modeling process by formulating building solving analyzing and criticizing mathematical models it is intended for a course introducing students to mathematical topics they will revisit within their further studies the authors present mathematical modeling and problem solving topics using maple as the computer algebra system for mathematical explorations as well as obtaining plots that help readers perform analyses the book presents cogent applications that demonstrate an effective use of maple provide discussions of the results obtained using maple and stimulate thought and analysis of additional applications highlights the book s real world case studies prepare the student for modeling applications bridges the study of topics and applications to various fields of mathematics science and engineering features a flexible format and tiered approach offers courses for students at various levels the book can be used for students with only algebra or calculus behind them about the authors dr william p fox is an emeritus professor in the department of defense analysis at the naval postgraduate school currently he is an adjunct professor department of mathematics the college of william and mary he received his ph d at clemson university and has many publications and scholarly activities including twenty books and over one hundred and fifty journal articles william c bauldry prof emeritus and adjunct research prof of mathematics at appalachian state university received his phd in approximation theory from ohio state he has published many papers on pedagogy and technology often using maple and has been the pi of several nsf funded projects incorporating technology and modeling into math courses he currently serves as associate director of comap s math contest in modeling mcm

Modern Pharmaceuticals, Two Volume Set

2016-04-19

traditionally livestock manure has been used to provide nutrients for plant growth and to improve soil conditions however the increase in concentrated animal feeding operations cafos results in high levels of plant nutrients such as nitrogen and phosphorus in the proximal crop and pasturelands as a result of applying more manure than what is required to meet the local plant nutrient demand soil runoff and leaching of land applied manure can enrich the surface and ground water with nitrogen and phosphorus leading to eutrophication and hypoxia in addition overapplication of animal manure contributes to

pathogen spread the release of hormones and other pharmaceutically active compounds and the emission of ammonia greenhouse gases and odorous compounds in this special issue we present 11 interesting articles covering the production of renewable energy and fuels extraction of ammonia from animal manure the agricultural and environmental benefits of using animal manure or its derived materials such as biochar or ashes and the difference in microbial communities and pathogen survival after anaerobic lagoon treatment

Official Gazette of the United States Patent and Trademark Office

2004

the three volume series history of the theory of numbers is the work of the distinguished mathematician leonard eugene dickson who taught at the university of chicago for four decades and is celebrated for his many contributions to number theory and group theory this second volume in the series which is suitable for upper level undergraduates and graduate students is devoted to the subject of diophantine analysis it can be read independently of the preceding volume which explores divisibility and primality and volume iii which examines quadratic and higher forms featured topics include polygonal pyramidal and figurate numbers linear diophantine equations and congruences partitions rational right triangles triangles quadrilaterals and tetrahedra the sums of two three four and n squares the number of solutions of quadratic congruences in n unknowns liouville s series of eighteen articles the pell equation squares in arithmetical or geometrical progression equations of degrees three four and n sets of integers with equal sums of like powers waring s problem and related results fermat s last theorem and many other related subjects indexes of authors cited and subjects appear at the end of the book

E [series Circulars].

1944

the 11 papers discuss analysis partial differential equations applied mathematics and scientific computing focusing on the work of peter lax and louis nirenberg whose 70th birthdays occasioned the conference specific topics include viscosity solutions for the porous medium equation holomorphic curves in contact dynamics and minimizing volume among lagrangian submanifolds no index member prices are 31 for institutions and 23 or individuals annotation copyrighted by book news inc portland or
