An Introduction to the Policy Process 2016 models for public systems analysis considers the mathematical model formulation to improve the delivery of urban service systems such as sanitation fire police and ambulances this book is composed of five chapters that demonstrate the translation of significant societal problems into a mathematical framework as well as the advantages and limitations of these models chapter 1 deals with the issue of plant location and siting questions with a brief overview of water resource modeling while chapter 2 provides set covering models for

manpower scheduling as a direct outgrowth of the author's experience with the sanitation department in New York City. Chapters 3 and 4 describe the delivery of emergency services particularly with models of congestion and delay and of optimal deployment. These chapters also present probabilistic analysis in nature since both the spatial and the temporal patterns of demand are intrinsically uncertain. The tools used are queueing theory and geometric probability. Chapter 5 examines network optimization methods mainly to explore questions of vehicle routing and scheduling. This chapter also provides a few comments on large scale models of urban growth these being generally more familiar to the regional planner than to the operations analyst. This book will prove useful to applied mathematics and policy science students.

Models for Public Systems Analysis 2013-09-17 New public management is a topical phrase to describe how management techniques from the private sector are now being applied to public services. This book provides a completely up to date overview of the main theoretical models of public sector management and examines the key changes that have occurred as more and more public services are contracted out to private organisations as the public sector itself grapples with internal markets. Drawing on economics, organisational theory and politics, Jan Erik Lane presents new public management from an analytical perspective. This book uses game theory and empirical studies in order to assess the pros and cons of new public management.
