The Soul of Science 1994

i consider the soul of science to be a most significant book which in our scientific age should be required reading for all thinking christians and all practicing scientists the authors demonstrate how the flowering of modern science depended upon the judeo christian worldview of the existence of a real physical contingent universe created and held in being by an omnipotent personal god with man having the capabilities of rationality and creativity and thus being capable of investigating it pearcey and thaxton make excellent use of analogies to elucidate difficult concepts and the clarity of their explanations for the nonspecialist for example of einstein s relativity theories or of the informational content of dna and its consequences for theories of prebiotic evolution are quite exceptional alone making the volume worth purchasing dr david shotton lecturer in cell biology department of zoology university of oxford pearcey and thaxton show that the alliance between atheism and science is a temporary aberration and that far from being inimical to science christian theism has played and will continue to play an important role in the growth of scientific understanding this brilliant book deserves wide readership phillip e johnson university of california berkeley this book would be an excellent text for courses on science and religion and it should be read by all christians interested in the relationship between science and their theological commitments j p moreland professor of philosophy talbot school of theology biola university

Uncommon Dissent 2014-05-13

recent years have seen the rise to prominence of ever more sophisticated philosophical and scientific critiques of the ideas marketed under the name of darwinism in uncommon dissent mathematician and philosopher william a dembski brings together essays by leading intellectuals who find one or more aspects of darwinism unpersuasive as dembski explains darwinism has gathered around itself an aura of invincibility that is inhospitable to rational discussion to say the least darwinism its proponents assure us has been overwhelmingly vindicated any resistance to it is futile and indicates bad faith or worse indeed those who question the darwinian synthesis are supposed in the famous formulation of richard dawkins to be ignorant stupid insane or wicked the hostility of dogmatic darwinians like dawkins has not however prevented the advent of a growing cadre of scholarly critics of metaphysical darwinism the measured thought provoking essays in uncommon dissent make it increasingly obvious that these critics are not the brainwashed fundamentalist buffoons that darwinism s defenders suggest they are but rather serious skeptical open minded inquirers whose challenges pose serious questions about the viability of darwinist ideology the intellectual power of their contributions to uncommon dissent is bracing

Jesus on Trial 2022-10-18

in *Jesus on Trial* David Limbaugh applies his lifetime of legal experience to a unique new undertaking making a case for the gospels as hard evidence of the life and work of Jesus Christ. Limbaugh, a practicing attorney and former professor of law, approaches the canonical gospels with the same level of scrutiny he would apply to any legal document and asks all the necessary questions about the story of Jesus told through Matthew, Mark, Luke, and John. His analysis of the texts becomes profoundly personal as he reflects on his own spiritual and intellectual odyssey from determined skeptic to devout Christian. Ultimately, Limbaugh concludes that the words Christians have treasured for centuries stand up to his exhaustive inquiry, including his examination of historical and religious evidence beyond the gospels, and thereby affirms Christian faith, spirituality, and tradition.

Summary of Nancy Pearcey's Love Thy Body 2009-05-26

please note this is a companion version not the original book sample book insights 1 the body person dichotomy is best understood through an example if a baby is human life from conception but not a person until some later time then those are two different things the former has no value and the latter has value only if we choose to value it 2 the assumption behind abortion is personhood theory which states that the human body has no value until the pre born child becomes conscious 3 the two story dualism of christianity is that there are two kinds of substances in reality body and soul the body is a part of nature and people have thought about nature as god s handiwork for centuries 4 the search for the origin of life has been reframed as the search for the origin of biological information information implies the existence of a mind and scientists have found evidence for teleology not only in living things but also in the physical universe

in this sweeping synthesis neal j cohen and howard eichenbaum bring together converging findings from neuropsychology neuroscience and cognitive science that provide the critical clues and constraints for developing a more comprehensive understanding of memory specifically they offer a cognitive neuroscience theory of memory that accounts for the nature of memory impairment exhibited in human amnesia and animal models of amnesia that specifies the functional role played by the hippocampal system in memory and that provides further understanding of the componential structure of memory the authors central thesis is that the hippocampal system mediates a capacity for declarative memory the kind of memory that in humans supports conscious recollection and the explicit and flexible expression of memories they argue that this capacity emerges from a representation of critical relations among items in memory and that such a relational representation supports the ability to make inferences and generalizations from memory and to manipulate and flexibly express memory in countless ways in articulating such a description of the fundamental nature of declarative representation and of the mnemonic capabilities to which it gives rise the authors theory constitutes a major extension and elaboration of the earlier procedural declarative account of memory support for this view is taken from a variety

of experimental studies of amnesia in humans nonhuman primates and rodents additional support is drawn from observations concerning the neuroanatomy and neurophysiology of the hippocampal system the data taken from divergent literatures are shown to converge on the central theme of hippocampal involvement in declarative memory across species and across behavioral paradigms
