life sciences students also this book is useful this book covers in detail the mechanisms for how energy is managed in the human body the basic principles that elucidate the reactivity and physical interactions of matter are addressed and quantified with simple approaches three dimensional representations of molecules are presented throughout the book so molecules can be viewed as unique entities in their shape and function the book is focused on the molecular mechanisms of cellular processes in the context of human physiological situations such as fasting feeding and physical exercise in which metabolic regulation is highlighted furthermore the book uses key historical experiments that opened up new concepts in biochemistry to further illustrate how the human body functions at molecular level helping students to appreciate how scientific knowledge emerges new to this edition 30 challenging practical case studies 2 3 at the end of each chapter based on movies novels biographies documentaries paintings and other cultural and artistic creations far beyond canonic academic exercises a set of challenging questions and problems in the end of each case study to further engage students with the applications of medical biochemistry insights into the answers to the challenging questions to help steer teaching learning interactions key to productive lectures pbl problem based learning or traditional tutorials or e learning approaches advance praise for the second edition the challenging cases are compelling both from a scientific viewpoint and for the perspective they provide on the history of medicine david m jameson university of hawaii using case studies to reinforce the biochemistry lessons is extremely effective as well as entertaining joseph p albanesi ut southwestern medical center advance praise for the first edition this textbook provides a modern and integrative perspective of human biochemistry and will be a faithful companion to health science students following curricula in which this discipline is addressed this textbook will be a most useful tool for the teaching community joan guinovart former director of the institute for research in biomedicine barcelona spain and former president of the international union of biochemistry and molecular biology iubmb this book is intended to be a review we assume the reader has ready had a course in biochemistry the book covers only the highlights and omits much detailed knowledge that is usually found in textbooks to which the reader should turn for further reference we hope those who are studying for medical national board examinations will find it particularly useful to this end we have included with most chapters some multiple choice questions whose answers can be found in the text each chapter has been contributed by a colleague who is an expert in the field and or an experienced teacher of the subject the words are the authors own though we have done some editing in order to achieve a reasonably consistent format because of the multiple authorship there is inevitably some unevenness in the depth of treatment of the various topics but we accept responsibility for decisions on what to include and what to leave out john w campbell ph d a graduate of this institution executed the drawings we did some figures ourselves typed most of the text and printed all of it on our pcs future editions should this one meet with success will be

Multiple Choice Questions in Biochemistry 2009-11-01 this book is intended to be a review we assume the reader has ready had a course in biochemistry the book covers only the high lights and omits much detailed knowledge that is usually found in textbooks to which the reader should turn for further reference we hope those who are studying for medical national board examinations will find it particularly useful to this end we have included with most chapters some multiple choice questions whose answers can be found in the text each chapter has been contributed by a colleague who is an expert in the field and or an experienced teacher of the subject the words are the authors own though we have done some editing in order to achieve a reasonably consistent format because of the multiple authorship there is inevitably some unevenness in the depth of treatment of the various topics but we accept responsibility for decisions on what to include and what to leave out john w campbell ph d a graduate of this institution executed the drawings we did some figures ourselves typed most of the text and printed all of it on our pc's future editions should this one meet with success will be revised periodically we welcome comments and constructive suggestions
