Creative Problem Solving, Grade 3 2004-05-17 in these talks given in europe ojai and india krishnamurti addresses the need to approach our life problems in a manner does not perpetuate fragmentation though we have many problems and each problem seems to produce so many other problems perhaps we can consider together whether the wisest thing to do is not to seek the solution of any problem at all it seems to me that our minds are incapable of dealing with life as a whole we deal apparently with all problems fragmentarily separately not with an integrated outlook perhaps the first thing if we have problems is not to seek an immediate solution for them but to have the patience to inquire deeply into them and discover whether these problems can ever be solved by the exercise of will what is important i think is to find out not how to solve the problem but how to approach it an extensive compendium of krishnamurti's talks and discussions in the usa europe india new zealand and south africa from 1933 to 1967 the collected works have been carefully authenticated against existing transcripts and

tapes each volume includes a frontispiece photograph of krishnamurti with question and subject indexes at the end the content of each volume is not limited to the subject of the title but rather offers a unique view of krishnamurti s extraordinary teachings in selected years the collected works offers the reader the opportunity to explore the early writings and dialogues in their most complete and authentic form

Quick Answers to Quantitative Problems 2014-06-28 there is no problem more baffling to the academic world than the problem of consciousness it s fair to say that no academic has any clue at all about what consciousness is in fact academics have totally confused it with something radically different namely sentience the problem that faces the academic world is the insurmountable one of how you get lifeless mindless purposeless objects material atoms to manifest subjectivity it s a category error to imagine that matter can provide any answers to the foundational issues of mind academics believe that to answer the problem of subjectivity is thereby to solve the hard problem of consciousness in fact the problem of subjectivity sentience is totally different from the problem of consciousness to understand why simply ponder all of the following statements 1 animals are sentient but not conscious 2 human babies are sentient but not conscious 3 humans who never encountered another human are sentient but not conscious 4 sleepwalking humans are sentient but not conscious the problem of sentience is drastically different from the problem of consciousness and if you conflate the two you have immediately set yourself an impossible task especially if you make any attempt to solve these problems within the framework of materialism i e the ideology of anti mind to understand what consciousness actually is it s essential to understand the difference in the world of sleep between dreaming and lucid dreaming exactly the same dichotomy is present in the waking world a sleepwalker is a person who can do complex tasks such as riding a motorbike for half an hour without any consciousness a conscious version of a sleepwalker engages in what we refer to as lucid waking lucid waking is the key to consciousness the fact is that consciousness is not an inherent property of human individuals it s not built into them it s acquired just as some people acquire the ability to become lucid dreamers since sleepwalkers could do many of the same things as conscious individuals the question is invited of why consciousness is required at all if you don t know what consciousness is how can you expand your consciousness to the maximum wouldn t you like to be maximally conscious think of the power you would have
